RE: Gravity Filter Units; Batch systems with reservoir

BCS ID: 2301178, 2301179, 2301180

Project Name: WeePlow 01192023 Microbial Filtration Efficacy

Dear Study Sponsor ,

We have completed the filtration efficacy study on the submitted units as outlined below. The contaminant species, study conditions, and water parameters utilized were based on client's request and adaptation of the guidance documents and protocols listed below:

Validation of Water Purifier Microbiological Reduction Efficacy: Screening of performance as per client request; BCS SOP-F1 (ISO17025:2017 accredited).

Report Conclusion: Study performed as per sponsors request

Following, you will find our report on the results of the study conducted on the referenced samples. Should you have any questions, please do not hesitate to contact me.

Sincerely,

George Lukasik, Ph.D.
Laboratory Director

THIS REPORT SHALL NOT BE REPRODUCED, EXCEPT IN FULL, WITHOUT THE WRITTEN CONSENT OF BCS LABORATORIES

Project: WeePlow 01192023 Microbial Filtration Efficacy

Date Received: 2023-01-19 12:40 Test Start Date: 2023-01-31 Test End Date: 2023-02-04

System Type: Nonplumbed pourthrough batch sys. w/o manfac. Recom. use patr Est. Capacity: N/A

Performance Indicating Device: N/A Batch Volume: N/A Batch, number per day: N/A

Test Cycle (min): NA Volume Per Day: 75 L Restricted Flow Rate: No

Test Duration (hr/day): 8 Test Conditioning: See report notes

Report Notes:

The purifier units were received from the study sponsor and each was assigned the referenced BCS identifier. Units were assembled and conditioned as per sponsor's instructions. Two filters were inserted into each upper reservoir and remaining filter ports were sealed. Conditioning/priming was performed as per video: https://www.youtube.com/watch?v=fWCw630MyhU&ab_channel=BigBerkeyWaterFilters. This was followed by 4 complete cycles of filtration of 8 liters of water. Each of the units were tested for initial bacterial reduction efficacy. Aliquots of the challenge species were added to General Test Water (GTW, NSF P231 (dechlorinated municipal tap water)) and the water was homogenized. 8-liters of challenge water was added to each units' upper reservoir and allowed to pass through. The filters' effluent was collected in its entirety, and the cumulative flow rate was determined. Influent and effluent samples were analyzed shortly following collection. following the challenge, water passage through each of the units was continued so that 75 liters of water was passed through each of the units on days 1-4. A float valve ensured that water level remained at full height (approximately 8 liters) in the upper reservoir except during no flow condition (overnight). The microbial filter challenge was repeated on days 1-4. The study was conducted as per laboratory's accredited ISO17025:2017 methodology: bacteria as per SM 9222 (APHA 2012) and EPA 1600, turbidity was determined as per SM2130B, pH as per SM4500HB, TDS as per SM2510, chlorine as per SM4500-Cl G, Total Organic Carbon (TOC) as per SM5310C, & hardness as per SM2340C (if needed). All analysis was conducted using calibrated and/or validated Instruments to traceable standards (NIST). All method QC was within method acceptance limit. No general environmental conditions are specified in the standard or have been identified that could affect the test results or measurements. END OF REPORT NOTES.

*I certify that I have examined and I am familiar with the information submitted herein. The results pertain only to the sample(s) tested, associated identifier #(s), and condition at receipt. Based on my inquiry of the individuals responsible for the analysis, I believe the data to be true, accurate, and complete. Unit descriptions and names were obtained from the submitted documents. The analysis was authorized and commissioned by the client or client's representative. The resulting data are representative of the analysis conducted on the collected samples and it's/their condition at the time of analysis. The data provided is strictly representative of the study conducted under laboratory conditions using the material/samples/articles provided by the client (or client's representative) and it's (their) condition at the time of test following receipt. The data obtained may not be representative or indicative of a real-life process and/or application. The sample(s) were analyzed in accordance with the appropriate method, however due to the inherent limitations of methods, microorganisms may avoid detection. BCS Laboratories offers no express or implied warranties concerning the quality, safety, and/or purity of any sample, batch, source, or the process they are derived from. Quality assurance controls were performed as outlined in the method and as per Good Laboratory Practices. Analyses were performed in accordance with laboratory practices and procedures set-forth by ISO 17025-2017 and NELAP/TNI accreditation standards unless otherwise noted. BCS makes no express or implied warranty regarding the ownership, merchantability, safety or fitness for a particular purpose of any such property or product.
